EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Magluyan on 2/19/2010.

The application has been amended as follows:

Independent claim 41: (currently amended)

A color conversion method of converting a monochrome signal into a color space color signal ~~on a color space independent of an apparatus~~, comprising the steps of:

setting a tint adjustment value used to adjust the monochrome signal to a desired tint desired by a user;

acquiring color reproduction characteristics dependent on an image output apparatus and a printing paper;

converting the monochrome signal into a chromaticity signal of the color space using the tint adjustment value set in the setting step and the color reproduction characteristics acquired in the acquiring step; and

forming a color space color signal from the chromaticity signal converted in the converting step and a brightness signal according to the monochrome signal, and outputting the color space color signal,

Art Unit: 2625

wherein in the converting step, the monochrome signal is converted so as to map chromaticity points of black print color and white print color depending on the image output apparatus and the printing paper, and map a chromaticity point of the tint adjustment value for middle lightness excepting neighborhoods of black print color and white print color, and

wherein in the acquiring step, the color reproduction characteristics dependent on the image output apparatus and the printing paper are acquired, as color values used as the black print color and white print color depending on the image output apparatus and the printing paper, from an output profile for converting a signal independent of the image output apparatus into a signal dependent on the image output apparatus.

Independent claim 46: (currently amended)

A color conversion apparatus for converting a monochrome signal into a color space color signal ~~on a color space independent of an apparatus,~~ comprising:

a setting unit that sets a tint adjustment value used to adjust the monochrome signal to a desired tint desired by a user;

an acquisition unit that acquires color reproduction characteristics dependent on an image output apparatus and a printing paper;

a conversion unit that converts the monochrome signal into a chromaticity signal of the color space using the tint adjustment value set by the setting unit and the color reproduction characteristics acquired by the acquisition unit; and

Art Unit: 2625

a forming and outputting unit that forms a color space color signal from the chromaticity signal converted by the conversion unit and a brightness signal according to the monochrome signal, and outputs the color space color signal,

wherein the converting unit converts the monochrome signal so as to map chromaticity points of black print color and white print color depending on the image output apparatus and the printing paper, and map a chromaticity point of the tint adjustment value for middle lightness excepting neighborhoods of black print color and white print color, and

wherein the acquiring unit acquires the color reproduction characteristics dependent on the image output apparatus and the printing paper as color values used as the black print color and white print color depending on the image output apparatus and the printing paper, from an output profile for converting a signal independent of the image output apparatus into a signal dependent on the image output apparatus.

2. The following is an examiner's statement of reasons for allowance:

Independent claims 41 and 46: The present invention is directed to a color conversion method and apparatus for converting a monochrome signal into a color space color signal. All prior arts with singularity or in combination fail to teach all of the limitations of the claimed invention, including: wherein the converting unit converts the monochrome signal so as to map chromaticity points of black print color and white print color depending on the image output apparatus and the printing paper, and map a chromaticity point of the tint adjustment value for middle lightness excepting neighborhoods of black print

Art Unit: 2625

color and white print color, and wherein the acquiring unit acquires the color reproduction characteristics dependent on the image output apparatus and the printing paper as color values used as the black print color and white print color depending on the image output apparatus and the printing paper, from an output profile for converting a signal independent of the image output apparatus into a signal dependent on the image output apparatus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
